User workflow: Python API / CLI

Released p4net SDK (v1.8.0)

Topology model and validation

Network lifecycle coordinator
start / stop; astart / astop

Compiler and cache
preprocess, key, publish

P4Runtime clients
synchronous / async

Runtime wrappers
BMv2, namespaces, veth

Companion research toolchain

Workload and
fault controller

Timing, sampling
and stage hooks

invoke

observe

artifacts

P4Runtime

launch

BMv2 processes
program JSON; gRPC control

Linux resources
host namespaces and veth endpoints

Solid: configuration / control / resources | Dashed: companion evaluation
